

PREMIUM BUSINESS SHDSL

Multi Location Computer Networking

TPG Premium Business SHDSL is a robust broadband solution for businesses with a need to connect their offices together on high availability, high speed network connections.

TPG's extensive and ongoing investment in telecommunications infrastructure within telephone exchanges allows us to control prices, bandwidth and availability to our customers.

These new SHDSL (Symmetric High bit rate Digital Subscriber Line) services are non-contended premium grade data services providing customers with total control over their use of the bandwidth. With no charges for traffic and the ability for the customer to prioritise their applications, TPG's SHDSL is an ideal solution for business applications such as Web and Email Servers, Voice over IP Services and Video Conferencing.

Important Features:

- ✓ Connects branch office computer systems to the head office.
- ✓ Fast, reliable and secure connections.
- ✓ Connections speeds start at 1Mbps (symmetrical).
- ✓ Outstanding price/performance.
- ✓ 100% throughput and use of the bandwidth for your applications.
- ✓ Includes VoIP and Videoconferencing capability.
- ✓ A flat rate monthly fee with no additional charges.
- ✓ Unlimited use of the service

What can TPG Premium Business SHDSL do for my business?

Reduce costs with unbeatable value for premium grade, high performance bandwidth services.

First class support with your choice of business hours support, 24*7 support or Proactive Management by TPG Engineers.

Guaranteed bandwidth throughput means you can send and receive large amounts of data at full line speeds.

Unlimited traffic means no excess charges, no preset data limits, no throttling that impedes performance.

Quality of Service so you can prioritise different types of traffic according to their importance to your business.

High speed connections available at 1Mbit/1Mbit, 2Mbit/2Mbit and 4Mbit/4Mbit.

A Private Network negate the need for expensive VPN devices or firewalls that add cost, complexity and points of failure.

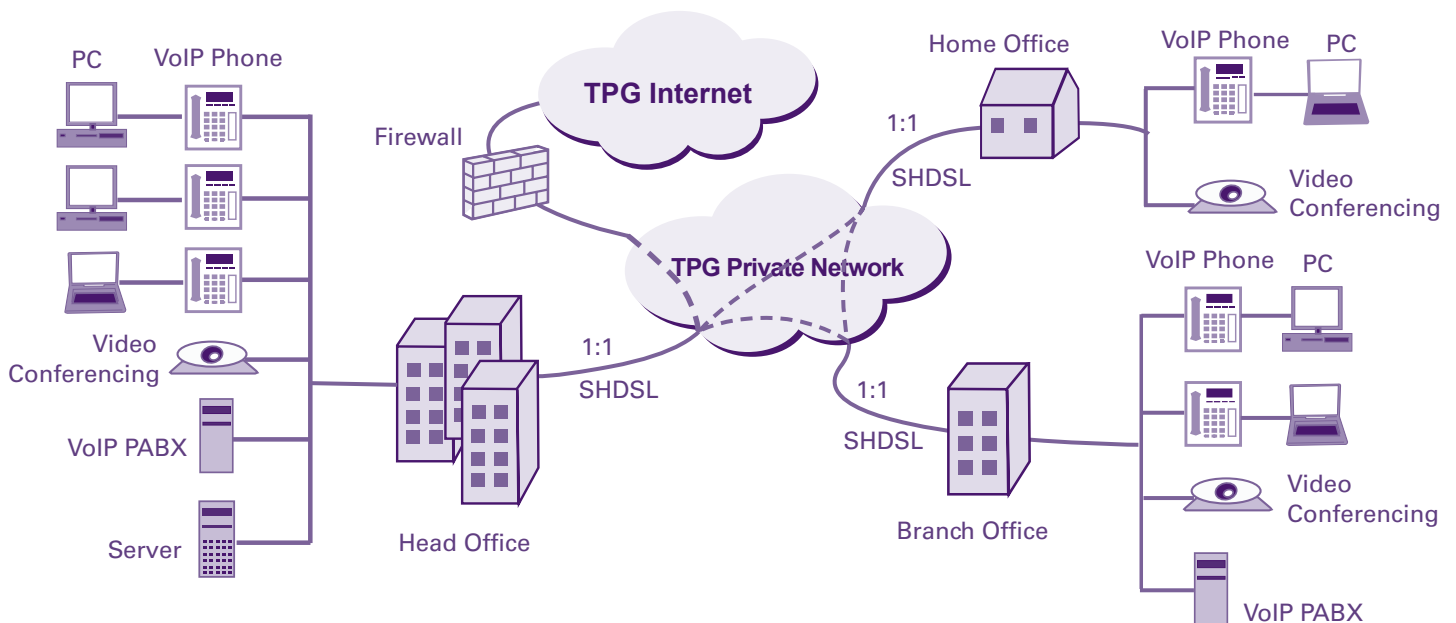

End to end responsibility – dealing with the owner of the equipment infrastructure means there is no finger pointing when it comes to support.

No contention ratio means you have full use and control of the bandwidth without performance interference or degradation from other customers.

VoIP ready – use the service for phone calls between your branch IP telephone systems at no additional cost.

Video conferencing ready – use your video conferencing units over the network at no additional cost.
