

## TPG over delivers on NBN speeds in ACCC report

Sydney, 7 May 2019 – TPG leads once again for NBN average download speeds in ACCC’s Measuring Broadband Australia program. This is the third consecutive time TPG has come first, making it the leader of these metrics in four out of the five quarters recorded by the ACCC.

In the report released today, TPG delivered an average download performance of 89% of the maximum plan speed during all hours, and 88.3% during busy hours. Both figures are the highest compared to other providers in the report.

TPG also came first in exceeding performance compared to its advertised download speeds for nbn50 and nbn100 services during busy hours. This shows that TPG under promised and over delivered on its NBN download speeds for these services.

TPG's Chief Operating Officer, Craig Levy, said:

“There are two aspects that we are most proud of. First, we are ranked number one for NBN average download speeds in four out of the five ACCC quarterly reports which shows how consistent our speeds and network quality have been. Second, we over deliver on our marketing promises so our customers are getting even more than the expectation we set, unlike some providers who do not achieve their

advertised busy hours speeds. We invite disgruntled customers of all providers to experience the incredible TPG difference.”

TPG continues to sell NBN services on nbn12, nbn50 and nbn100 speed tiers on both month-to-month and 18-month plans, appealing to both renters and home owners.
