IMPORTANT MESSAGE

Your router has been pre-configured, you do not need to follow each step of the set-up guide but should retain this document in case you need to manually configure your equipment.

To configure your PC/Laptop with your wireless password including changing your wireless password, please proceed to step 4.

Contents
1. Physical Connection
2. Network Configuration
3. Configuring Internet
4. Configuring Wireless
5. Change of Password

1. PHYSICAL CONNECTION

Please refer to the Quick Reference Guide.

PLEASE NOTE: Have your router powered on and connected directly to your PC via Ethernet Cable before you begin, as these instructions are based on wired Ethernet connection

2. NETWORK CONFIGURATION

PPPoE connection does not require you to have an IP address or DNS settings manually encoded on your network card.

PPPoE connection uses authentication to establish the Internet connection and it's after doing this that your router is assigned an IP and DNS settings from TPG.

To begin, your PC needs to receive a private IP address from the router. Most NBN routers have DHCP enabled by default that will take care of this.
To ensure your Network Card is ready for this, please follow the following steps:

A. Click on **Start** -> **Control Panel** -> **Network and Internet** -> **Network and Sharing Center** -> **Change adapter settings**

B. Right click on Local Area Connection and select **Properties**

C. Double Click on **Internet Protocol Version 4 (TCP/IPv4)** -> **Properties**

D. Ensure “**Obtain an IP address automatically**” is selected

E. Ensure “**Obtain DNS server address automatically**” is selected

F. Click **OK**
3. Configuring Router

A. Open your browser and in the address bar type http://192.168.1.1 and press Enter

B. Enter admin for both the username and password and click OK. If you have changed the login credentials, please enter the current username and password for your router interface.

C. Click on the WAN tab. Change WAN type to “PPP over Ethernet”

D. Enter your TPG username and password. Click Save and apply the changes

E. Quick Setup complete! The setup wizard is completed.
4. CONFIGURING WIRELESS

Things you need to know before you begin:

By default the NBN Wireless Router that you purchased from TPG is configured with the following wireless security settings:

SSID (name for the wireless connection):
TPG-xxxx (xxxx is a random 4 digit alpha numeric code)

Authentication Type: WPA-PSK/WPA2-PSK

Encryption: TKIP/AES

Pre Shared Key: initially configured to be the same as your TPG password. You can enter your own text as an option.

To use Wireless be sure that you already have set up your wireless adapter.

A. Click Start -> Control Panel -> Network and Internet -> Network and Sharing Center -> Change adapter settings

B. Right click on Wireless Network Connection and click 'Connect/Disconnect'

C. Find the SSID (network name) of your router and click Connect. By the default, the network name should be TPG-xxxx (xxxx is a random 4 digit alpha numeric code).

D. You will now be prompted to enter your WPA Key / wireless password. This is the same as your TPG password if you did not change it on the router.

E. Click OK.
F. You should now see your status as 'Connected'.

5. CHANGE OF PASSWORD

For security purposes we highly recommend that you change your password if you are using your default or if you believe your password security has been compromised.

To change your password, first please visit https://cyberstore.tpg.com.au/your_account/?function=changepassword.

Your new password will take approximately 10-15 minutes to take effect, after which you must reconfigure your new password in your router.

PLEASE NOTE:
Each time your router is powered on, it will initialize this automated authentication process after which your router will receive a public IP address (fixed or dynamic depending on your plan) and DNS settings from TPG.
